

Test Plan

For

Temu App

Prepared by:

Esther Chidimma Onyekwere

Date created: 02/06/2025

1.0 Introduction

This test plan defines the testing strategy for the core features of the Temu e-commerce application. It focuses on verifying critical functionalities such as Sign Up, Login, Forgot Password, Cart Management, and Payment Method to ensure they work correctly and provide a smooth user experience. The goal is to identify any defects early and ensure that these essential features meet the specified requirements before the app is released to users.

1.1 Overview

Temu is an e-commerce platform designed to offer users a seamless online shopping experience across mobile and web platforms. The app focuses on user convenience, secure access, and smooth navigation through core functionalities such as account management, product selection, and order processing.

2. Objectives

The primary objective of this test plan is to ensure that the core features of Temu e-commerce application. These functionalities include sign up, login, cart management, payment method, and password recovery. The goals include:

- Validate input accuracy and error handling
- Secure user authentication
- Ensure new users can create an account with valid details.
- Functional and persistent cart behaviour
- Secure and smooth payment handling
- Safe and reliable password recovery process

3. Scope of Testing

In Scope

- **Sign Up:** Creating a new user account via email or phone
- **Login:** Logging in with existing credentials
- **Add to Cart:** Adding, updating, and removing products from the shopping cart
- **Payment Method:** Choosing and completing payment with various options
- **Forgot Password:** Resetting a user's password via email or phone verification

Platforms:

- - Android (Mobile App)
- - iOS (Mobile App)

Out of Scope

- Third-party email server performance
- Multi-factor authentication (Two factor authentication)
- Backend microservice performance analysis
- Payment gateway compliance testing

4. Test Strategy

The testing will be carried out manually, following a combination of positive, negative, and boundary test cases. Exploratory testing will also be performed to uncover any hidden issues.

5. Features to Be Tested

A. Sign Up

- Register new users using email or phone number
- Validate input fields (empty, invalid formats)
- Verification code (OTP) workflow
- Success and failure feedback
- Handling of already registered accounts properly

B. Login

- Successful login with correct credentials
- Attempt login with incorrect credentials
- Account lock after repeated failures
- Session handling and timeout
- Social login

C. Forgot Password

- Request reset password via email or phone number
- Evaluate the correctness of confirmation & error messages displayed.
- Handle expired or invalid links or OTPs (One Time Password)
- Set new password and validate with login

D. Add to Cart

- Add items to cart from different pages
- Update quantities or remove items
- Remove item from cart
- Cart data retention post-login and logout
- Handling unavailable items

E. Payment Method

- Choose from multiple payment methods (Card, Wallet, Apple Pay)
- Apply promo codes and discount
- Handle successful and failed transactions
- Confirmation page with order summary

6. Test Deliverables

1. Test Plan Document
 - Scope, objectives, resources, schedule.
2. Test Scenarios and Test Cases
 - Detailed steps to execute tests.
3. Test Data
 - Dummy or anonymized real data to test.
4. Bug Report
 - Record of all issues found during testing
5. Test Summary Report
 - Final result, coverage, defects, and conclusions.

7. Entry and Exit Criteria

Entry Criteria

- Requirements are finalized and signed off.
- The test environment is set up and accessible.
- Test data is available.

Exit Criteria

- All planned test cases are executed.
- No critical or high-priority defects remain open
- UAT is approved by team
- Test cases executed with a high pass rate.

8. Resources and Roles

Role	Responsibility
Test Lead	Oversees test planning and execution
QA Lead	Execute tests and logs
Developer	Fix defects and provides technical clarifications
Product Owner	Reviews and signs off User Acceptance Testing

9. Risks and Mitigation

Risk	Mitigation
Delay in receiving test data or email credentials	Communicate early with stakeholders
Test data unavailability	Prepare and validate test data early
Poor communication	Regular status meetings and updates
Environment downtime	Schedule backups and define SLAs

10. Test Environment

- Devices: Android & iPhone
- OS Versions: Android 10 -13, IOS 14 -17
- Network: Standard Wi-Fi, 3G, 4G, 5G
- Email Service: Gmail testing accounts
- Tools: Jira (for bug tracking), Google sheets (for test case management)

11. Conclusion

This test plan outlines the comprehensive testing approach for core functionalities of the Temu e-commerce application, including Sign Up, Login, Forgot Password, Cart Management, and Payment Method. Each of these features plays a critical role in ensuring a seamless and secure user experience.

By validating both positive and negative scenarios, the plan aims to identify potential defects early, ensure compliance with user requirements, and confirm that the app performs reliably under expected conditions. The outlined test cases will help verify that users can securely access the platform, recover account credentials, manage their shopping cart efficiently, and complete purchases using available payment methods without issues.
